THE SKULL-DOWN REVIEW® · EDITORIAL

The Skull-Down Mandate

By Dr. Robert Zeravica, DC

For one hundred years, Doctors of Chiropractic looked at the spine.

For fifty years, dentists looked at the jaw.

For fifty years, medicine looked at apnea.

But no one looked at the entire body —

from the skull to the feet —

as ONE biomechanical temple designed to breathe.

This is the birth of a new profession.

A new worldview.

A new mandate.

Sleep isn't only about the lungs. Or the throat. Or the nose.

It is shaped from the skull down —

through the dura, through the rhythms that God placed in the human frame.

When you free the body's rhythms,

breath can open,

sleep can deepen,

and life can flourish.

This is not technique.

This is stewardship.

This is worship.

This is chiropractic fulfilling its divine purpose.

CHIROPRACTIC SLEEP ACADEMY® · SECULAR EDITION

The Skull-Down Mandate

For a century, Doctors of Chiropractic studied the spine. For decades, dentists studied the jaw. For decades, medicine studied the apnea event itself.

Each saw a real part. None saw the whole.

The body breathes as one integrated system — from the skull to the feet. Sleep and airway aren't only a throat problem or a jaw problem. They're shaped by the whole structural frame the airway sits in.

That whole-body structure is an **under-addressed dimension** of sleep and airway care. CPAP and oral appliances hold the airway open — and for many patients they're the right tool. But they work only when they're used, and a large share of patients can't or won't tolerate them. What none of these tools address is the **structure around the airway**.

That is the gap the Doctor of Chiropractic is equipped to **assess and manage** — measured with testing, and coordinated with the dentist and physician **as peers**.

This is the **Skull-Down model**: assess the whole chain — cranial mechanics, cervical curve, thoracic and diaphragmatic movement, pelvis, and even foot posture and gait — because each **may influence** how the airway performs at night.

A body breathes. Our job is to make sure the structure lets it.

Secular edition for professional, medical, dental, and patient venues. The faith-register credo appears on the reverse. ·
